

Data protection when using AI

Purpose and scope

This document outlines how personal data is handled during drone incident services provided at events. The company provides drone monitoring as a service. Live feed or Recordings are made only when necessary for safety, crowd monitoring, and incident detection, and are stored for a short period.

Roles and responsibilities

The event organizer is responsible for operating the monitoring station with medical specialists.

Authorized medical personnel of the event organizer may access live feeds and recordings.

The company acts as a technology provider, supplying drones, command center including software. The company is also responsible for storing, processing, visualizing the data in a safe, reliable and secure way. The company cannot be held liable for unsafe data protection activities of the customer.

Each party is responsible for complying with applicable data protection obligations within their role.

Types of collected data

Low-Resolution Video (Navigation & Pathfinding)

Context

Low-resolution video is used during routine flight and pathfinding to support navigation, obstacle awareness, and general situational overview.

Storage & Access

- Processed in real time
- No persistent storage except flight data used to improve services.
- Access only for authorized event personnel and paramedics.

Retention

- Only bare minimum data to improve services is stored

- Personal or sensitive data is deleted automatically after each incident.

High-Resolution Video (Incident Monitoring)

Context

High-resolution video is activated only when the drone arrives at an incident scene to allow detailed assessment and coordination of response.

Storage & Access

- Stored temporarily on secure local or encrypted systems
- Access restricted to authorized event personnel
- No distribution or reuse

Retention

- Stored for a maximum of 24 hours.

Still Images

Context

Still images may be extracted from video footage to document specific incidents or safety situations.

Storage & Access

- Stored alongside related incident footage
- Access restricted to authorized personnel

Retention

- Same retention period as the associated high-resolution video
- Secure deletion after retention period expires

Data protection principles and methods

Lawfull, Fair and Transparent

Principle

Data is processed only for legitimate safety purposes in a way that is fair for involved individuals.

Methods

- Clear definition of monitoring purpose before each event
- Event organizers inform staff and attendees
- No hidden or secondary use of recordings
- Clear description of roles and responsibilities
- Data is blurred/anonymized by default if details are not necessary for the incident or use case.

Purpose Limitation

Principle

Data is exclusively collected for drone and emergency services navigation and incident response.

Methods

- Low-resolution video used only for navigation and pathfinding
- High-resolution recording is only active at incident scenes
- Use or sharing of footage with law enforcement is possible in exceptional cases.

Data Minimization

Principle

Only the minimum amount of data necessary is collected.

Methods

- Default use of low-resolution video
- High-detail recording limited to incident scenes without surroundings.
- The duration of recordings is limited to the lifecycle of an incident.
